Web Application	✓	✓
Mobile Application	x	x
Mobile Services	x	x
V3 API	✓	x
V7 Core API	✓	✓
V7 Data API	✓	x
Data Views	x	✓

## Release Summary

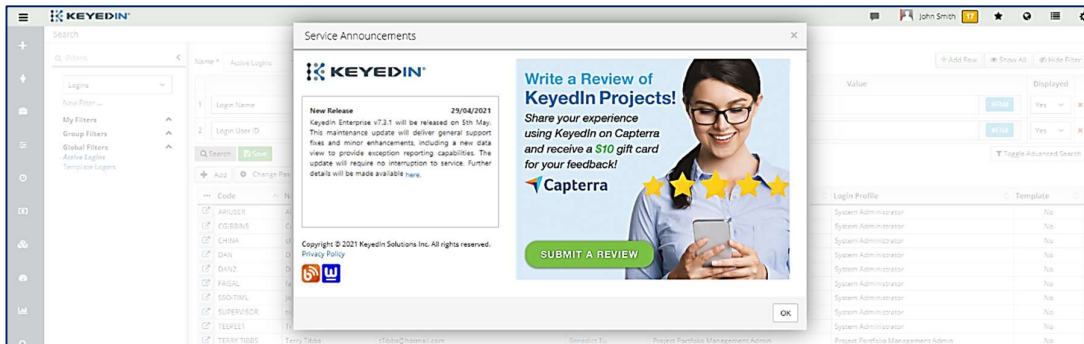

KeyedIn Enterprise v7.3.1 is a scheduled maintenance update release with general support fixes and minor enhancements, including a new data view to provide exception reporting capabilities.

Single Sign On (SSO) users will now be notified of service announcements via an on-screen pop up immediately after logging into the system. Non-SSO users will remain unaffected and continue to see these announcements on the standard login page.

Customers will be notified separately via our internal Support process (Freshdesk) for any of their tickets that have now been resolved in this Release.

## Service Announcement Alerts for SSO Users

Single Sign On (SSO) users will now be notified of new service announcements via an on-screen pop up immediately after logging into the system. This ensures all users remain informed of any upcoming service changes, including new releases and any planned downtime for maintenance. The user simply clicks on OK to remove the message which will not appear in subsequent logins.

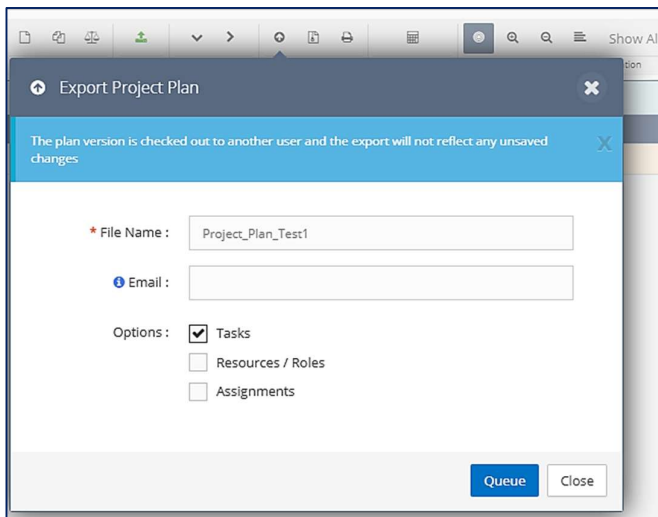

A new *Service Announcements* button on the top menu can be used to view recent announcements that have already been read.

Non-SSO users will remain unaffected, and will continue to see these service announcements on the standard login page.

## Ability to Export Task Plan Whilst Checked Out to Another User

Users of the enhanced Task Plan Gantt are now able to export Project plans while the plan is checked out to another user. Note that the export will reflect the latest saved state of the plan at the time the queued export is processed.

## New V7 Login API available

The *Login* entity is now able to be administered using the V7 Core API. Please refer to the API documentation for further details.

**UK:** <https://coreapi.keyedinprojects.co.uk/apidocs>

**USA:** <https://coreapi.keyedinprojects.com/apidocs>

**Australia:** <https://coreapi.keyedinprojects.net/apidocs>

Note, the corresponding enhanced UI changes for Login administration are scheduled for the v7.4 Summer Release.

## Data View Changes

A new *Project Summary* data view has been introduced to provide basic exception reporting capabilities. This data view is an extension to the existing *Project Administration* data view which includes additional fields allowing users to return counts of records associated with any Project; for example Tasks, Assignments, Risks, Issues, Forecasts and Supply.

A count of 0 will be returned for any associated entities that do not exist. By using appropriate filters in the Report Writer, this can be used to generate exception reports or widgets for Projects that **do not** have any of these linked records.

This data view can be requested from Support using the KeyedIn Support portal.

The following data view changes have been made for this release:

Data View	New Fields
Project Summary (v7.0.0) - <b>New</b>	As referenced above, new data view to support Project Admin 'Exception Reporting' Ability
Project Timesheet Actuals (v7.0.0) - <b>New</b>	New data view - for the "Projects TS Actuals" table
Risk/ issue General Data view (v6.0.4)	Add Project Location
Forecast Demand Monthly (v6.0.1)	Add Supply, Scheduled and Actual FTE fields
Forecast Demand Weekly (v6.0.2)	Add Supply, Scheduled and Actual FTE fields
Timesheet General (v6.0.10)	Add Project Workflow fields
Expense General (v6.0.4)	Add Project Workflow fields

Data view changes are not applied automatically. Please contact Support for installation guidance.
