Mobile Services	x	x
V3 API	x	x
V7 Core API	✓	x
V7 Data API	x	x
Data Views	x	x

## Release Summary

Keyedin Enterprise's Autumn 2021 Release, v7.4, is the second major release of the calendar year, following on from the success of the 7.3 release in March which delivered Task based Kanban and PowerPoint Reporting capabilities.

This release now provides a fully enhanced reporting offering with the ability to view and schedule both chart and data reports in PDF format. Enhanced reports using PDF output are now also able to apply watermarks, to classify sensitive data, for example.

Additionally, a wide variety of general usability experience enhancements have been made to most functional areas including Projects, Resourcing, Timesheets, Dashboards, Portfolio Kanban and Search filters. Each feature is described in more detail in the main release guide.

Please note that functionality for *Combination ('Combo') Reports* will not be carried forward to the Enhanced Report Writer and customers requiring this type of reporting should consider using Keyedin's PowerPoint reporting capabilities. Existing combination reports will continue to be supported for a period of time in the old Report Writer as part of phased sunsetting.

This release also sees the completion of our Administration refactor for primary entities, including the Client, Resource and Security items. The Login and Login Profile entities in particular benefit from significant usability improvements. As some of these entities are frequently used in day to day administration, we recommend Administrators familiarise themselves with the changes in preparation for go live.

Standard maintenance and support fixes are also included in this release, and customers will be notified separately via our internal Support Portal for any of their tickets that have been resolved.
