Data Views	x	✓

Release Summary

Keyedin Enterprise v7.5 for Summer 2022 is a major release which delivers a fresh, enhanced user interface and various usability and administrative improvements to benefit a wide variety of users.

New Look User Interface with Dark Mode option

A modernised user interface welcomes all users upon logging in after the update, delivering **improved styling** and subtle layout and behaviour changes. This offers a cleaner, more minimalist approach and is applied throughout the system.

The main **Project Navigator Hierarchy** has been greatly improved and now provides visibility and selection of a Project at any level, providing a faster, more fluid navigation experience.

Users can individually opt to engage the **dark mode styling theme**, which has known visual ergonomic benefits including reduced eye strain in low light conditions.

As part of the new interface, all users will be alerted to **Service Notifications** via a new pop-up when logged into the web application. This facility doubles up as a means for System Administrators to create their own **custom system announcements** to their user base, or selected groups of users.

Highlights of other New Features and Improvements

Resourcing

- Make smarter, more confident resourcing decisions by defining a **Location Hierarchy** that readily integrates into the suite of Resourcing functionality.
- More easily search for Resources, Roles and Projects that sit within a Team or Location hierarchy.
- Minimise administration overhead by easily removing a Resource's future allocations upon deactivation.

Project Management

- Take full control over what you see on the Kanban style Task Board with a powerful *Task tagging* feature to further simplify the management and collaboration of agile Projects.
- Multiple Task Board column views are configurable to allow different delivery teams to better visualise and manage progress.

- Multi-select Project Custom Fields facilitates fast selection, tracking and reporting of multiple pre-defined values within a single field, including Keywords, Number Lists and entities such as Activities, Clients and Resources.
- A new system field for Project Outcome provides a standardised, consistent approach for recording the conclusion of completed Projects and can be used in conjunction with our predictive analysis services offering to identify Projects likely to fail based on historic trends.

Reporting

- An increased limit of 20 Databoxes per View/Dashboard with label override/suppression.
 - Databoxes can now also be added to Custom Dashboards, which can be easily published to other users.
- Prevent accidental deletion of reports with the new *Protected* flag.
- The Report run screen has been simplified with an improved, cleaner UI that more closely mirrors the filter operation of the enhanced Report Writer.

Dataloads

- More easily import data from a template spreadsheet using the new wizard based interfacd, which has been developed for the standard Administration entities, with background processing and improved error handling and messaging.

KeyedIn Enterprise Domain Changes

It was earlier announced on the Login Page and Support Portal that the URLs for the web portal will be changing over to the KeyedIn Enterprise domain, in parallel with the v7.5 release. Existing APIs and Mobile services will remain unaffected and unchanged, however please refer to the section that follows regarding the new Enterprise API (and corresponding URL) that should be used for any new API calls or integrations from now on.

A summary of the current and New URLs is below:

Current URL	New URL
v6.keyedinprojects.co.uk keyedinprojects.co.uk	keyedinenterprise.co.uk
v6.keyedinprojects.com keyedinprojects.com	keyedinenterprise.com
v6.keyedinprojects.net keyedinprojects.net	keyedinenterprise.net

Mobile Application Change

The mobile application has been modified to support the new Enterprise domains and mobile Single Sign On (SSO) with these new domains.

Further information about the domain change can be found on the support portal [here](#):

<https://keyedinsupport.freshdesk.com/support/solutions/articles/44002330544-keyedin-enterprise-service-domain-names>

New Enterprise API with Time & Expense support

In-line with the new Keyedin Enterprise domain, a new Enterprise API will be publicly available which will also provide Time and Expense support. Further details will be made available at time of release.

As we progress with the rewrite of our application using Single Page Architecture, API support for additional entities will be progressively made available.

The V3 and V7 APIs will continue to remain available for users to switch over at their convenience, and there will be no impact on any existing integrations using the API.

Note on Internet Explorer 11 Support

Also previously announced by us on 5th May 2022, Microsoft's support for Internet Explorer 11 (IE 11) ended on 15th June 2022. Keyedin will cease to support IE 11 for Keyedin Enterprise at the same time. Internet Explorer 11 Compatibility Mode in Microsoft Edge will also no longer be supported. This means that some functions may no longer operate as intended.

The desktop browsers supported by Keyedin Enterprise editions will become the latest versions of:

- Microsoft Edge
- Firefox
- Google Chrome
- Safari

Please raise a support ticket if you have any concerns regarding this change.
